CSS properties have different allowable values, depending on which property is being specified. In our example, we have the color property, which can take various color values. We also have the font-size property. This property can take various size units as a value. A CSS stylesheet will contain many such rules, written one after the other.

What is CSS? - Learn web development | MDN - Mozilla

The CSS properties we use for that are 'padding-left' (to move the body text) and 'position', 'left' and 'top' (to move the menu). There are other ways to do it. If you look for "column" or "layout" on the Learning CSS page, you will find several ready-to-run templates. But this one is OK for our purposes.

Starting with HTML + CSS - W3
