Data to be sent to the server. If the HTTP method is one that cannot have an entity body, such as GET, the data is appended to the URL.. When data is an object, jQuery generates the data string from the object's key/value pairs unless the processData option is set to false.For example, { a: "bc", d: "e,f" } is converted to the string "a=bc&d=e%2Cf".If the value is an array, jQuery serializes ...

**jQuery.ajax() | jQuery API Documentation**
The success callback function is passed the returned data, which will be an XML root element or a text string depending on the MIME type of the response. It is also passed the text status of the response. As of jQuery 1.5, the success callback function is also passed a "jqXHR" object (in jQuery 1.4, it was passed the XMLHttpRequest object).. Most implementations will specify a success handler:
