Neural Networks And Deep Learning
Neural Networks and Deep Learning is a free online book. The book will teach you about: Neural networks, a beautiful biologically-inspired programming paradigm which enables a computer to learn from observational data Deep learning, a powerful set of techniques for learning in neural networks

Neural networks and deep learning
Deep learning is a subset of machine learning where neural networks — algorithms inspired by the human brain — learn from large amounts of data. Deep learning algorithms perform a task repeatedly and gradually improve the outcome, thanks to deep layers that enable progressive learning. It's part of a broader family of machine learning methods based on neural networks.

The "Neural Networks and Deep Learning" book is an excellent work. The material which is rather difficult, is explained well and becomes understandable. (even to a not clever reader, concerning me!). The overall quality of the book is at the level of the other classical "Deep Learning" book.

Neural Networks and Deep Learning: A Textbook: Aggarwal ...
Deep learning and deep neural networks are a subset of machine learning that relies on artificial neural networks while machine learning relies solely on algorithms. Deep learning and deep neural networks are used in many ways today; things like chatbots that pull from deep resources to answer questions are a great example of deep neural networks.

Neural Networks and Deep Learning Explained
Deep-learning networks are distinguished from the more commonplace single-hidden-layer neural networks by their depth; that is, the number of node layers through which data must pass in a multistep process of pattern recognition.

Deep learning - Wikipedia
More specifically, he created the concept of a "neural network", which is a deep learning algorithm structured similar to the organization of neurons in the brain. Hinton took this approach because the human brain is arguably the most powerful computational engine known today.

Deep Learning Neural Networks Explained in Plain English
Most applications of deep learning use "convolutional" neural networks, in which the nodes of each layer are clustered, the clusters overlap, and each cluster feeds data to multiple nodes (orange and green) of the next layer.
