The Oracle Database Security Assessment Tool (DBSAT) is a stand-alone command line tool that accelerates the assessment and regulatory compliance process by collecting relevant types of configuration information from the database and evaluating the current security state to provide recommendations on how to mitigate the identified risks.

Oracle Database Security Assessment Tool (DBSAT ...

Security has not always been as big an issue as it is now. In the past, DBAs were more focused on performance, high availability, or scalability. Today, security is an issue at the forefront of every IT project. Security should come by design and by default, so developers need the right tools to help make that happen. Recently, François Pons, senior principal product manager at Oracle ...
