### Roads To Geometry

Here, within a historical perspective, we travel a variety of "roads" through plane geometry by investigating different axiomatic approaches to the study of Euclidean plane geometry. Axiomatic developments of geometry as proposed by Euclid, David Hilbert, G. D. Birkhoff, and the School Mathematics Study Group (SMSG) are compared and contrasted.

The geometric design of roads is the branch of highway engineering concerned with the positioning of the physical elements of the roadway according to standards and constraints. The basic objectives in geometric design are to optimize efficiency and safety while minimizing cost and environmental damage.

### Geometric design of roads - Wikipedia

Its usage is not limited to roads and highways as it can also refer to railways. Geometric design of roads, or as it is simply known, geometric design, is a type of study in road engineering that deals with the geometrical features of the roadway. AASHTO has established guidelines for geometric design of roads applicable to rural and urban roads.

The great mathematician is said to have replied "There is no royal road to geometry." [Euclid2010]. Today we have some of the same challenges, but different attempts to find "royal roads" — i.e., attempts to skirt the process of hard work that is necessary to master a field sufficiently well to comment knowledgeably on the subject.
