### **CHAPTER- I INTRODUCTION TO NANOMATERIALS 1.1 INTRODUCTION**

Understanding nano-bio interactions is non-trivial, as the physics of nanomaterials is between the frontiers of classical and quantic physics, in the 'mesoscopic scale'. Unlike quantic and macroscopic physics, in the mesoscopic scale, the average behaviors exist but are profoundly affected by fluctuations that have a deterministic origin.

### **Understanding cellular interactions with nanomaterials ...**

Dissolution rates of nanomaterials can be decisive for acute in vivo toxicity (via the released ions) and for biopersistence (of the remaining particles). Continuous flow systems (CFSs) can screen for both aspects, but operational parameters need to be adjusted to the specific physiological compartment, including local metal ion saturation. CFSs have two adjustable parameters: the volume flow ...
